

Java

```
class Solution {  
    public int[] countWordOccurrences(String[] chunks, String[] queries) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {string[]} chunks  
 * @param {string[]} queries  
 * @return {number[]}  
 */  
var countWordOccurrences = function(chunks, queries) {  
  
};
```

TypeScript

```
function countWordOccurrences(chunks: string[], queries: string[]): number[] {  
  
};
```

C++

```
class Solution {  
public:  
    vector<int> countWordOccurrences(vector<string>& chunks, vector<string>& queries) {
```

```
}  
};
```

C#

```
public class Solution {  
    public int[] CountWordOccurrences(string[] chunks, string[] queries) {  
  
    }  
}
```

Kotlin

```
class Solution {  
    fun countWordOccurrences(chunks: Array<String>, queries: Array<String>): IntArray {  
  
    }  
}
```

Go

```
func countWordOccurrences(chunks []string, queries []string) []int {  
  
}
```
